EMALL Information - Microsoft Interne...
Manual Entry
When using manual entry the user selects the number of items to search for from the drop down list. The minimum form size is 20 and the maximum is 200. The first field is a drop down list of searchable attribute, (NSN, NIIN, Mfr Part Number, UPC, Catalog Number). The second is a text box in which the value to search for is entered. After filling out the form click the search button to perform the search. If the from is not completely filled out Power Search will only search for the filled out lines of the form.
Importing a file
Power search can also be done by importing a file. The format of the input file is described below. To import a file either enter the path to the file in the text box under Import A File or click the browse button to select a file from your PC. After the file has been entered/selected click the submit button to import the file to power search. Once the file as been imported click the search to perform the search.
Import File Format
The format for the import file for power search is attribute |tab key| value. Where the 'attribute' is either the label indicated below or the associated number defining the type of search to be done. The 'value' is the value you would like to compare. An import file can be created with MS Excel or another spread sheet application. The first column will contain the attribute and the second will contain the value. Once the data is entered save the file in Text (Tab delimited) format.
